

PROPOSAL • 23 SEPTEMBER 2026

Trident Realty

*A project website that lists every unit —
and an immersive tour that ends in a booking.*

PHASE 1 Unit listing website

PHASE 2 Immersive 3D tour + direct token booking

Prepared by _____

The moment you are losing

What happens at the end of a site visit decides the sale.

A virtual tour that ends in "please fill this enquiry form" wastes the conviction it just created. The buyer leaves to think it over. The follow-up call starts cold, and the flat stays available for someone else.

The fix is not a better brochure. It is to let the buyer commit while they are still standing in the home they just walked through.

TODAY

Tour → enquiry form → follow-up call → maybe

PROPOSED

Tour → unit blocked → token paid → receipt on the buyer's phone

Two jobs, two phases

Phase 1 stands on its own. Phase 2 turns the same inventory into a closing tool.

1 The project website

Sell to the visitor who found you online.

- Every unit listed, filterable and priced
- Plans, areas, facing, availability, gallery
- OTP-verified enquiries that record the unit viewed
- Inventory and leads managed from one admin

Goes live on its own, before Phase 2 is ready.

2 The immersive booking layer

Close the buyer sitting in front of your executive.

- Turn the tower, pick a floor, open a home
- 360° walk-through of that home
- Block the unit and collect the token, live
- Salesman mode for the tablet and the lounge

Built on an engine that already works today.

Phase 1 — the project website

Fast, mobile-first, and built around the inventory rather than around a brochure.

1 Unit listing

Every unit in the project, filtered by tower, BHK, floor, facing, area and budget.

2 Unit detail

Plan, carpet and super built-up area, facing, floor, indicative price, live status.

3 Floor plans

Typical floor plates per tower and a plan for every unit type.

4 Amenities & gallery

Amenity renders with descriptions, exteriors, interiors, site progress.

5 Location

Map, connectivity, landmarks and distances.

6 Legal & RERA

Registration numbers, disclaimers, privacy policy and terms.

Phase 1 — the engine behind it

The part that decides whether the site is useful six months after launch.

Inventory

- One source of truth for every unit
- Bulk upload from your existing Excel
- Available → Blocked → Booked → Sold
- Every status change logged with who and when
- Prices public, on request, or staff-only

Leads

- Phone OTP verification, so numbers are real
- Each lead records the unit being viewed
- Instant WhatsApp / SMS to the buyer
- Instant alert to the assigned executive
- Dashboard, assignment, notes, export

Admin

- Inventory and price-list editing
- Content, gallery and FAQ management
- Roles: admin, sales head, executive, finance
- No developer needed for day-to-day changes
- Training session and manual at handover

Phase 2 — the buyer's journey

Six steps, one screen, no dead ends.

1 Turn the tower

Drag to rotate the building. The tower is outlined and live.

2 Pick a floor

Floors highlight one by one: "4 of 4 homes available, from ₹X Cr".

3 See the homes

The floor plate opens, cut into flats, coloured by type, sold ones greyed.

4 Open the home

Full detail, the plan drawn to scale, interior renders, price break-up.

5 Walk it in 360°

Room to room through doorway arrows, or a walkable 3D model.

6 Book it

Block the unit and pay the token, in the same screen.

Steps 1 to 5 are working software today — we will show you. Step 6 is what Phase 2 adds.

Salesman mode

The same platform, logged in, built for a tablet in the sales lounge.

- Presentation view: full screen, no clutter, controls big enough for a finger
- Live inventory — a flat booked in another office turns grey in front of the buyer
- Block a unit with one tap and a visible countdown; holds expire and release themselves
- Cost sheet computed from the rate card: base, floor rise, PLC, parking, charges, GST
- Collect the token then and there, on the buyer's own phone
- Hand-off: unit status, buyer details and payment reference reach the CRM with no re-entry
- Dashboard per executive: tours given, units blocked, tokens collected, conversion

Why it matters

The executive with a live, interactive tower on a tablet outsells the one holding a printed price list — and never quotes a flat that was sold an hour ago.

Works offline-tolerant: if the site network drops, the payment link goes to the buyer by SMS.

How the token is collected

Six steps from "I like this one" to a booked unit and a receipt.

The unit changes status only when the gateway confirms to our server — never on what a browser claims. A failed or abandoned payment releases the hold automatically.

Four things that protect Trident

Points your compliance and finance teams will ask about first.

1 Money never touches us

Payments settle directly into Trident Realty's own merchant account, on the gateway's normal cycle. We do not hold, route or disburse buyer funds.

2 The buyer pays on their own phone

Your executive never types a card number, CVV, UPI PIN or OTP. No card data reaches the tablet or our servers, which keeps the system out of PCI-DSS scope.

3 No flat is ever sold twice

A booking is written in one locked database transaction. Two executives booking the same flat in the same second produce one booking and one clear message.

4 No money, no booking

Status changes on the gateway's signed server confirmation only. Every hold, payment attempt, status change and refund is logged and exportable for audit.

The legal wrapper around a booking

Shown, and accepted, before the pay button.

- RERA registration number of the project and agent, with the RERA website link
- That the token is a booking amount, not an allotment — allotment follows Trident's acceptance and the agreement to sell
- The cancellation and refund policy, shown and ticked before payment
- That prices, areas and images are indicative, and renders are artist impressions
- GST treatment of the token, and the receipt and invoice that follow
- Consent for data processing under the DPDP Act 2023, and the privacy policy

Who writes it

Trident's counsel supplies the wording. We build the flow around it and keep a versioned record of exactly which text each buyer accepted, and when.

Refunds and cancellations are performed by Finance from the admin panel, against your published policy, with a reason and an audit trail.

What we need from Trident — Phase 1

The clock starts when these arrive, not at signing.

What	Detail
Inventory sheet	Excel, one row per unit: tower, floor, flat no., type, carpet, built-up, SBUA, balcony, facing, rate, status
Rate card	How a final price is computed — floor rise, PLC, parking, club, statutory charges, GST
Plans	Typical floor plate per tower and per floor type; unit plan per type with dimensions. PDF or CAD
Renders & photos	Exterior, interiors, amenities, site progress — at the highest resolution available
Project content	Specifications, approvals, possession dates, USPs, developer profile
Legal & brand	RERA numbers, disclaimers, privacy policy, terms; logo, fonts, colours, guidelines
Access & owner	Domain or subdomain access, enquiry recipients, and one empowered person to sign off

What we need from Trident — Phase 2

Mostly renders. They are the long pole — brief the studio in week 1.

What	Specification
Tower orbit renders	180–240 frames, full 360°, 4K, day (night optional) — delivered as numbered frames, not video
ID / Cryptomatte masks	On 13–20 stop frames. This is what makes each floor, flat and balcony clickable to the pixel
360° interiors	Equirectangular 2:1, 8000 × 4000, one per room, camera at 1.5 m, one set per unit type
Unit 3D model	GLB or FBX in metres, under ~300k triangles, PBR materials, rooms named
Payment gateway	Trident’s own merchant account with KYC complete, test and live keys
Token policy & T&C	Token amount or formula, hold duration, and legally approved booking terms
Sales roles	Who may block, who may book, who may refund, and approval limits

A full technical brief for the rendering studio is attached — frame counts, mask passes, camera settings, file naming, and a small pilot batch we test before the full render, so nothing is wasted.

How it is built

Choices made for search visibility, speed on a phone, and money that cannot go missing.

Layer	Choice	Why
Frontend	React + Next.js, server-rendered	Search visibility for the listing pages, speed on mobile
Immersive layer	Our React + Three.js engine, embedded	Already built and proven; runs inside any page
Backend	Node.js API + PostgreSQL	Transactional integrity — what makes double-booking impossible
Media	Object storage behind a CDN	Orbit frames and panoramas are large; they stream from the edge
Payments	Razorpay / PayU / Cashfree, hosted checkout	Funds settle to Trident; no card data touches our systems
Hosting	Managed cloud, Indian region	Data residency, latency, DPDP alignment

Encrypted in transit and at rest · daily backups with tested restore · uptime monitoring and alerting · rate limiting and bot protection on forms and payment endpoints · full audit log

Timeline

Working weeks, assuming inputs arrive on time and feedback returns within three working days.

Phase 1

7 – 8 weeks

Phase 2

10 – 12 weeks

Partly parallel to Phase 1. The single biggest risk to this timeline is late renders — which is why the studio is briefed in week 1.

Commercials

Priced per phase, so Trident can stop, start or resequence without renegotiating the whole engagement.

#	Item	Amount (INR)
1	Phase 1 — project website, inventory and lead engine	
2	Phase 2a — immersive experience configured with Trident’s assets	
3	Phase 2b — booking engine, payment integration, salesman mode	
4	Render processing, per tower and per unit type	
5	Annual maintenance and support, from month 2 after launch	
6	Hosting, CDN and third-party services, at actuals	

Payment schedule

40% on signing · 30% on design sign-off · 20% on UAT · 10% on go-live, per phase

Support

60 days of warranty after each go-live, then an annual support retainer

Validity

This proposal is valid for 30 days from its date

What Trident gets out of it

Beyond a better-looking website.

Decide today

The buyer commits while standing in the home they just walked through, not two weeks later on a cold follow-up.

Paid on the spot

Token collected at the moment of maximum conviction, on the buyer's own phone, with a receipt in seconds.

Never sold twice

One live inventory across every office. No evening spent reconciling three spreadsheets.

Every tour measured

Which towers get explored, which floors, which units are blocked but not paid — marketing follows evidence.

And the platform outlives the project — the second Trident project is a configuration, not another build.

Next steps

Four things, and rendering can start in the first week.

- 1 Trident confirms the phasing, the token policy and who may book
- 2 We issue the studio brief so rendering starts in parallel — the long pole
- 3 Kick-off workshop: inventory sheet and content handover
- 4 Phase 1 design begins

We would be glad to walk your team through the working demo — tower, floors, units, plans and a 360° tour — so it is judged as a working thing rather than a description of one.
